**ChosenSecurity Simplifies PKI Rollout with
Enterprise ID AutoEnrollment**

***Leading ID Verification Provider Offers
Easy Integration with Windows Applications***

NEEDHAM, Mass.—December 11, 2006—ChosenSecurity, Inc., a leading specialist in identity verification and security services, today announced the availability Enterprise ID AutoEnrollment. The latest offering from ChosenSecurity, formed from a division of identity verification leader GeoTrust, helps businesses implement public key infrastructure (PKI) technology quickly and easily in Microsoft environments.

Based on the Microsoft Windows AutoEnrollment protocol, Enterprise ID AutoEnrollment lets security administrators create and distribute digital certificates centrally, without the need for additional client software. Certificates can be issued to single computers or groups and, because the certificates draw on information in the Microsoft Active Directory, they are easy to use. They can also be issued for all users with existing Windows accounts, without the need for additional registration.

"By automating certificate issuance, administrators can save a great deal of time, while still ensuring that their Windows environments are completely protected by PKI," said Neal Creighton, ChosenSecurity CEO. "With the Enterprise ID AutoEnrollment solution, organizations also benefit from the managed certificate authority services of an industry-leading identity verification and security services provider."

"A top priority at Microsoft is making it easy for customers to integrate security solutions into their Windows environments," said Steven Guggenheimer, GM, Microsoft Application Platform and Development Marketing. "We're pleased that ChosenSecurity's strategic direction supports integration of its PKI-based solutions with Microsoft applications. Together, our innovations can help organizations and individuals better secure their business."

Enterprise ID AutoEnrollment supports all Microsoft applications, including client authentication for Microsoft Internet Explorer, e-mail encryption and signing for Microsoft Outlook, document signing for Microsoft Office, authentication for VPNs and applications from software producers. The solution offers all the security benefits of

Enterprise ID as well as the ease of use and convenience of a managed certificate authority (CA).

The Enterprise ID AutoEnrollment server is installed on a Microsoft Enterprise Server at the host company and communicates using secure encryption.

Enterprise ID AutoEnrollment is now available. For more information, visit www.chosensecurity.com.

About ChosenSecurity

ChosenSecurity, Inc. is a leading specialist in identity verification and security services that ensure safe and secure online communication and transactions. Since 1997, the company, previously a subsidiary of GeoTrust, has offered certificates and security solutions along the entire value chain of identity verification.
