

iPlanet Enterprise Server 4.1

Installing your Web Server Certificate

Your certificate will be sent to you by email - your web server certificate is in the body of the email message. Copy the certificate from the body of the email and paste it into a text editor (such as notepad) to create text files.

Installing your Web Server Certificate

Start Netscape Suitespot **Server Administration** page.

Log in as the web server administrator.

Select **Security** at the Server Administration page.

Select **This Server**.

Enter your **Key Pair File Password**. This password was created during CSR generation.

Select **Message Text** with headers.

Cut and paste the contents of Your **Web Server Certificate**.

Include the headers and footers of the certificate; beginning with -----BEGIN CERTIFICATE----- and including -----END CERTIFICATE----- .

Click **OK**.

Click **Add Server Certificate** to install this certificate into the database.

Click **OK** on the popup windows.

Go to **Preferences** and select **View Server Settings** to check your security settings.

Click on **Security**.

The **Encryption On/Off** page is displayed.

The Encryption should be **On**. The port number is **443**.

Click **OK** in the warning box.

Type the **password** you used when you generated the key pair in the popup window.

Save and apply the changes.

Click **OK** to return to the previous page.

NOW add Server for **Port 80**

Click on **Servers**.

Select **Add Server**.

Click **OK** to return to the previous page.

Click **View Server Settings** to verify the settings for **port 80 and port 443**.

Test your certificate by connecting to your server.

Use the https protocol directive (e.g. <https://your server/>) to indicate you wish to use secure HTTP.

Note: The padlock icon on your Web browser will be displayed in the locked position if you have set up your site properly.
